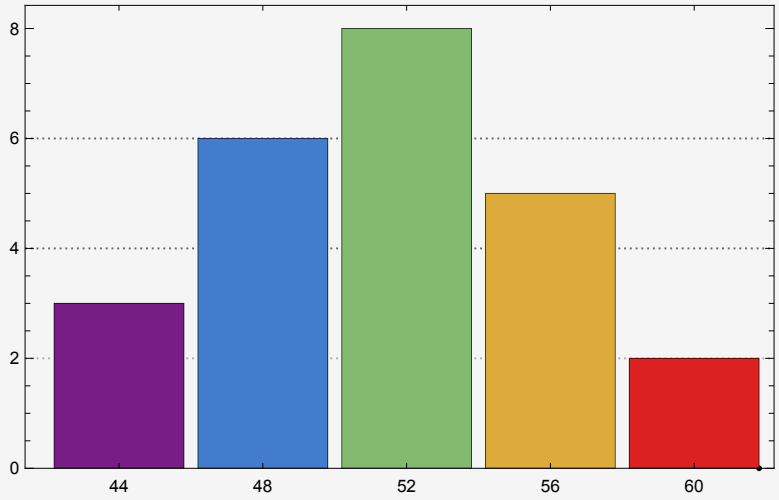
Egg Weight Frequency Distribution

The frequency table shows the weights of eggs laid by hens on a free range farm.
Adjust the sliders to change the frequency of each weight category.
Try to calculate the mean weight of the eggs (to 1 decimal place).

Egg Weight (grams)	Frequency	Weight × Frequency
44	3	132
48	6	288
52	8	416
56	5	280
60	2	120
Total	24	1236

Visual Distribution



Calculate the Mean :

Formula: Mean = (sum of weights × frequencies) ÷ (total frequency)

Show Solution

Statistics :

Total eggs: 24
Sum of (weight × frequency): 1236
Mean weight: ? grams

44g eggs: 3
48g eggs: 6
52g eggs: 8
56g eggs: 5
60g eggs: 2
